

Installation guide

The package installation consist of two Sitecore Update Packages:

- 1) Sitecore.SharedSource.DataSync.Master.update
- 2) Sitecore.SharedSource.DataSync.Core.update

Preinstallation instructions:

1. Backup your databases before installation.
2. Go to the sitecore/admin/UpdateInstallationWizard.aspx and upload the packages.
3. Analyze each package before installation.
4. Install the Master and Core package.

The Master package will install: an assembly, a config file, some shell commands, wizards and editor, a few icons in images.

The Core package will install some ribbon items, as well as an editor application items.

Postinstallation instructions:

1. Make sure your Sitecore installation has SMTP server settings configured. If not go to App_Config/include/Sitecore.SharedSource.DataSync.config file and enable the settings.
2. Log in to Sitecore, go to system/Modules/DataSync and start creating your sync job.

Have fun!
